Consultation paper on the Emergency Department ICD-10-AM principal diagnosis short list

Executive summary

The Independent Hospital Pricing Authority (IHPA) is currently developing an emergency department (ED) ICD-10-AM principal diagnosis short list for implementation in the Non Admitted Patient Emergency Department Care National Minimum Data Set (NAPEDC NMDS) for 2016-17. The short list includes proposed terminology for each diagnosis code based on the corresponding ICD-10-AM code description as well as terminology currently used by jurisdictions.

The purpose of this paper is to seek wider consultation with jurisdictions and key stakeholders, which will inform the development of the short list.

Submissions should be uploaded via IHPA's website:
www.iHPA.gov.au/internet/iHPA/publishing.nsf/Content/submissions

Submissions close at 5pm, Friday 28 August 2015.

All submissions will be published on IHPA's website unless respondents specifically identify sections that they believe should be kept confidential due to commercial or other reasons.

1 Introduction

1.1 Independent Hospital Pricing Authority

IHPA was established as part of the implementation of the National Health Reform Agreement 2011 (NHRA). Under the NHRA, the Council of Australian Governments unanimously agreed to the establishment of activity based funding (ABF) as the primary funding methodology for public hospitals throughout Australia. The aim of a national ABF system is to improve the efficiency and transparency of funding contributions of the Commonwealth, state and territory governments for each Local Hospital Network across Australia.

IHPA has a number of determinative functions as specified by the NHRA. IHPA's primary role is to determine the national efficient price and national efficient cost for public hospital services.

Other functions IHPA has responsibility for include determining adjustments to the national efficient price to reflect legitimate and unavoidable variations in the cost of delivering health services, determining data requirements and developing and specifying the classifications for services provided by public hospitals.

Classifications aim to provide the health care sector with a nationally consistent method of classifying all types of patients, their treatment and associated costs, resulting in improved management, measurement and funding. IHPA undertakes reviews and updates of existing classifications and is also responsible for introducing new classifications.

1.2 Classification of emergency care patients

Patient presentations to public hospital emergency departments are currently classified using Urgency Related Groups (URGs). URGs group patient presentations on the basis of the type of visit, episode end status (i.e. admitted to hospital or returned home), triage category and principal diagnosis.

IHPA is currently developing a new emergency care classification system and undertaking a targeted costing study to inform classification and data development.

1.3 ED principal diagnosis reporting

The ED principal diagnosis is usually reported by an ED clinician directly into the patient administration system, or alternatively recorded on a hard copy form by an ED clinician and entered into the patient administration system by an administrative officer. The reporting of the patient diagnosis in the ED setting is different from the admitted patient setting, where patient diagnoses are extracted from clinical documentation in the health record by a clinical coding workforce.

For reporting purposes, each jurisdiction has developed local short lists of ED principal diagnosis codes or terms. In some jurisdictions the short lists are consistent across all EDs, while in other jurisdictions the short lists vary between facilities.

Consultation paper on the Emergency Department ICD-10-AM principal diagnosis short list

The ED principal diagnosis is currently reported within the NAPEDC NMDS. The NMDS allows a string of up to nine characters using any of the following code sets:

- ICD-10-AM 6th edition, 7th edition, 8th edition or 9th edition
- International Classification of Diseases – 9th Revision – Clinical Modification (ICD-9-CM) 2nd edition
- Systematized Nomenclature of Medicine – Clinical Terms – Australian versions Emergency Department Reference Set (SNOMED–CT–EDRS).

1.4 Requirement for ED ICD-10-AM principal diagnosis short list

In 2013-14, IHPA undertook an investigative review of national and international emergency care classification systems to recommend options for improving the classification of ED patients in future years. The *Investigative review of classification systems for emergency care services in Australia*¹ noted there was strong support for the development and maintenance of a national ED short list of principal diagnosis codes, and that maintaining a short list could potentially improve reporting consistency, data quality and have efficiency advantages. Consultations were held with ED clinicians who advised that a short list of 1,000 to 2,000 codes would be considered sufficient to capture all the major diagnoses within an ED, with rarer codes offering little additional value.

The use of inconsistent short lists and multiple diagnosis classifications has led to major variance in the national reporting of the number and types of diagnoses within the ED, both within and across jurisdictions.

Consistent reporting of the ED principal diagnosis will provide the health care sector with higher quality ED classification systems, more accurate data for research and statistics, and provide crucial data for policies on funding, budgeting and setting costs. ED principal diagnosis data will increase in importance with its use becoming more prominent in future ED classification development.

1.5 Project objectives

IHPA's key objective is to develop an ED principal diagnosis short list using ICD-10-AM for implementation in the NAPEDC NMDS for 2016-17, with only a specific set of ICD-10-AM codes being permitted for national reporting.

The short list is intended to contain a sufficient amount of codes to ensure the list is clinically comprehensive and meaningful, however be practical for clinicians to manage and use effectively.

IHPA has also considered the terminology for each diagnosis code in the short list.

2 Project governance

2.1 Emergency Care Advisory Working Group

The Emergency Care Advisory Working Group (ECAWG) is the key consultation group for developing approaches to classifying emergency care services under ABF in Australia. The group meets approximately every six weeks and includes jurisdictional representatives from state, territory and Commonwealth health departments. ECAWG have provided oversight of the development of the ED principal diagnosis short list.

¹ Health Policy Analysis (2014). *Investigative review of classification systems for emergency care – Final report*, Independent Hospital Pricing Authority, Sydney.

2.2 Emergency Care Advisory Working Group Clinical Sub-Group

The ECAWG Clinical Sub-Group (ECAWG CSG) was engaged by IHPA to provide clinical guidance for the development of the ED ICD-10-AM principal diagnosis short list. The ECAWG CSG is comprised of eight clinical representatives from emergency medicine, paediatric emergency medicine, nursing, and one health information representative. The ECAWG CSG's clinical representatives include two members of IHPA's Clinical Advisory Committee (CAC).

3 IHPA's approach to short list development

3.1 ED principal diagnosis definition

The ED principal diagnosis is currently defined as the diagnosis established at the conclusion of the patient's attendance in an ED to be mainly responsible for occasioning the attendance following consideration of clinical assessment, as represented by a code.² Comorbidities and causes of injuries are not intended to be captured as the principal diagnosis, and can be captured as secondary data items in other ED collections.

Consultation questions

1. Could the current definition of the ED principal diagnosis be improved in any way?

3.2 Stage one – development of guiding principles

IHPA proposed principles to guide the analysis and development of the short list. These principles were used to guide the decision of which specific diagnoses should be included in the short list. Determining a set of guiding principles ensured that the development process remained manageable, consistent and efficiently reviewed relevant codes.

The application of all principles was governed by the ECAWG CSG.

The principles applied to the development of the short list relate to:

- volume of presentations reported for the diagnosis
- consistency of use of the diagnosis codes between jurisdictions
- comparability with ICD-10-AM diagnosis codes reported in the admitted setting
- exhaustive nature of the short list, with appropriate inclusion of residual diagnosis categories for conditions which do not have a specific code in the short list
- captures a clinical patient diagnosis rather than the cause of injury or a comorbidity, with external causes of morbidity and mortality codes (chapter 20) excluded from the short list.

3.3 Stage two – analysis of ICD-10-AM and diagnosis selection

National jurisdictional activity reported for each ICD-10-AM diagnosis code was reviewed by IHPA to produce a draft short list of the most relevant and useful codes for inclusion. Short lists that are currently used by jurisdictions as well as international short lists were also analysed by IHPA and taken into consideration.

The draft list was reviewed by the ECAWG CSG who stated whether they supported the inclusion of the proposed diagnosis codes.

3.4 Stage three – development of draft short list

The draft short list was finalised following completion of the review by IHPA and the ECAWG CSG.

The following summary includes the number of codes in the draft short list for each ICD-10-AM chapter.

Chapter	Description	Number of codes
1	Certain infectious and parasitic diseases	86
2	Neoplasms	21
3	Diseases of blood, blood-forming organs and immune mechanism	13
4	Endocrine, nutritional and metabolic diseases	30
5	Mental and behavioural disorders	39
6	Diseases of the nervous system	41
7	Diseases of the eye and adnexa	30
8	Diseases of the ear and mastoid process	17
9	Diseases of the circulatory system	57

Chapter	Description	Number of codes
19	Injury, poisoning and other consequences of external causes	280
21	Factors influencing health status and contact with health services	6
Total		949

The draft ED ICD-10-AM principal diagnosis short list complete with terminology can be seen at Appendix A.

Consultation questions

2. Are all ED principal diagnoses adequately accounted for in the short list, and if not, which further principal diagnosis codes should be included?
3. Do you have any suggestions to improve the draft short list?

3.5 Stage four – development of terminology

International and jurisdictional short lists were analysed by IHPA to consider the most appropriate terminology for each proposed diagnosis code. Terminology was assigned to each code based on the following guidelines:

- where a condition has been listed with different terminology to the ICD-10-AM descriptor by more than half of jurisdictions, the term already used by jurisdictions should be assigned where clinically appropriate. For example elevated blood glucose level will be listed as hyperglycaemia
- the condition should be listed before the site of the condition, for example dislocation of knee
- where a condition has codes available with greater specificity, the unspecified grouping should include the wording 'not otherwise specified' to alert the clinician that codes with greater specificity are available
- where the corresponding ICD-10-AM descriptor is deemed to be clinically appropriate however not the most commonly used term, the commonly used term will be listed first with the ICD-10-AM descriptor in brackets. For example hand, foot and mouth disease will be listed as hand, foot and mouth disease (enteroviral vesicular stomatitis with exanthema)
- where the terminology assigned is clinically appropriate however does not contain enough specificity to indicate commonly assigned conditions, the condition will be included in brackets. For example jellyfish stings will be listed as poisoning, marine animals (includes jellyfish sting)

Consultation questions

4. Is the terminology assigned to all codes clear and comprehensive, and if not, which terminology should be amended?
5. Are there any codes that you would not be able to find with ease in the current draft short list?

Consultation paper on the Emergency Department ICD-10-AM principal diagnosis short list

6. Are the commonly used terms being placed prior to the ICD-10-AM descriptor in brackets helpful?
7. Do you have any suggestions to improve the current terminology list?

3.6 Stage five – mapping of complete ICD-10-AM code set

While the intention is for a nationally consistent ED principal diagnosis short list, the mapping of all codes is important for statistics, research, data integrity and the ongoing maintenance of the short list.

All valid codes within ICD-10-AM 9th edition have been mapped to the appropriate short list codes.

The ED ICD-10-AM principal diagnosis mapping table cannot be provided within this paper as it contains the complete ICD-10-AM 9th edition code list. Access to the Australian-Refined Diagnosis Related Groups Classification System which incorporates the ICD-10-AM is subject to strict licensing arrangements. If you wish to view the ED ICD-10-AM principal diagnosis mapping table please contact the IHPA via secretariatihpa@ihpa.gov.au.

Consultation questions

8. Are there any codes mapped to residual categories where the grouping is considered to be too broad?

4 Ongoing governance and maintenance

4.1 Governance

IHPA will maintain overall governance of the short list however will require the involvement of the ECAWG CSG and CAC to ensure clinical relevance is maintained.

4.2 Maintenance

Any additions or modifications to the NAPEDC NMDS will continue to be approved by the National Health Information Standards and Statistics Committee and the National Health Information and Performance Principal Committee.

Specifications for the short list need to be released in the preceding financial year to allow sufficient lead time for local implementation requirements.

IHPA is proposing to align updates to the short list with the current two yearly ICD-10-AM development cycle.

Although jurisdictions will retain control over how diagnosis is recorded at a local level, it is intended that jurisdictions will only report against the short list codes defined in the NAPEDC NMDS for national reporting. It is preferred that jurisdictions record diagnosis data using the short list codes to avoid additional mapping processes for reporting.
