

Development of the Australian Teaching and Training Classification – public consultation

Submission from the Office of the Chief Dental Officer, Western Australia

- The TT Classification Paper refers to dental yet the vast majority of dental training takes place in a community (not hospital) setting.
- The TT Classification Paper refers to consultation with the ADA and Dental Board but does not disclose that there was no meaningful response from either of these entities as neither are involved in training.
- Suggest that training in a community setting must be examined.
